

THE NEW ROOM PARTITIONING SYSTEM

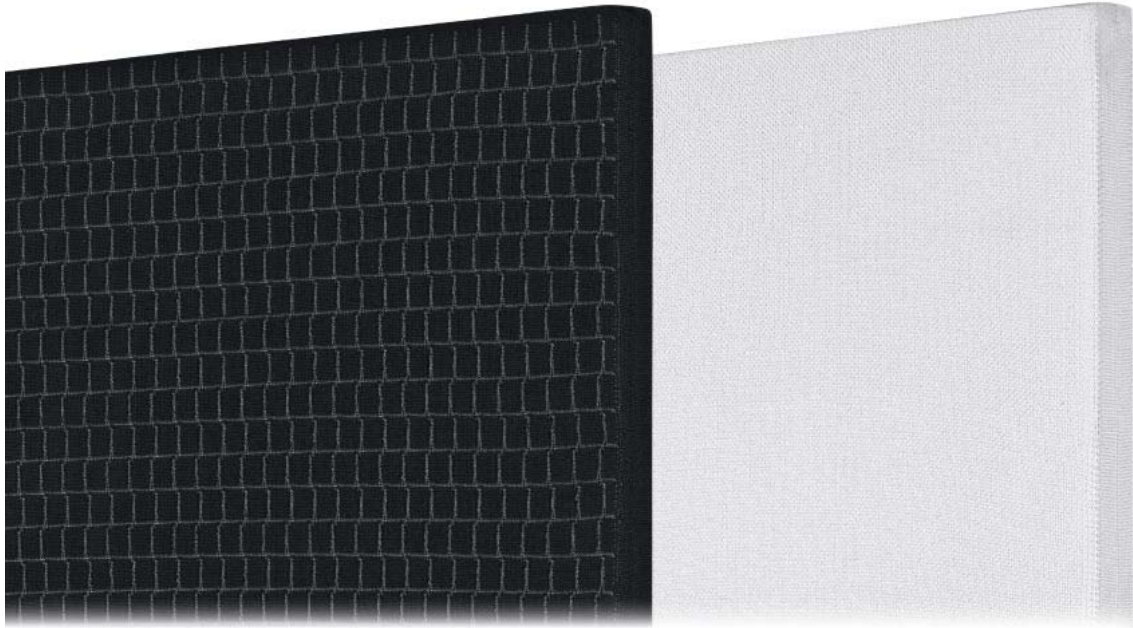

ROSSOACOUSTIC TP30

This new fabric version of the TP30 system was inspired by the transparent, micro-perforated Rossoacoustic CP30 system, which has enjoyed success for a number of years now. The conscious, formal allusion to the transparent honeycomb structure interprets the issue of acoustic effectiveness in a new and fascinating way.

In contrast to the usual fabric partition systems to be found on the market, the new fabric-based Rossoacoustic TP30 Space Divider enthral with its lightness and materiality. Rossoacoustic TP30 KNIT translates the familiar honeycomb structure of the transparent and micro-perforated Rossoacoustic CP30 system into a soft but businesslike fabric idiom.

Besides its design and acoustic benefits, the new Rossoacoustic TP30 KNIT also exerts a certain fascination due to the new type of manufacturing method used: the fabric coverings are manufactured by means of a CAD-controlled circular knitting process. This manufacturing process is the only way the fabric coverings – available in two varieties – can be knitted without any seams at all.

Rossoacoustic TP30 KNIT gives you the choice of two different patterns: TP30 KNIT MESH and TP30 KNIT PLAIN.

Rossoacoustic TP30 COLOURS captivates with its soft feel and cosy, vital selection of colours; it perfectly complements fabric covered seats and lounge furniture. With the new Rossoacoustic TP30 COLOURS room partitioning system, Rosso is offering its first selection of fabric covers from Kvadrat, an innovative manufacturer from Denmark. With Rossoacoustic TP30 COLOURS, Rosso has succeeded in achieving a sensual fusion of acoustic functionality and the soft, cosy feel of fabrics.

The secret lies under the Rossoacoustic TP30 KNIT und TP30 COLOURS fabric covering: In combination with the familiar Rossoacoustic CP30 honeycomb structure, a new type of Rossoacoustic lightweight fleece forms a very light and strong honeycomb core. Besides ensuring acoustic effectiveness, this configuration is also responsible for the partition's great strength and unmatched light weight. This would not be possible without the honeycomb core specially developed for such purposes and applications together with the Fraunhofer Institute for Building Physics.

As a fabric-based and acoustically effective room dividing system, Rossoacoustic TP30 KNIT and TP30 COLOURS provides the required private sphere and acoustic shielding, thereby creating ideal conditions for concentration and communication at work. Rossoacoustic TP30 is available in four formats and with various types of feet.

Aktuell wurde das neue Rossoacoustic TP30 System mit dem Innovationspreis Architektur Textil und Objekt 2012 der AIT ausgezeichnet. Überzeugt hat die Jury die einfache Handhabung beim Wechsel der Dekorhülle die puristische, auf das Wesentliche reduzierte rahmenlose Konstruktion, die Leichtigkeit des Elements und die Flexibilität bei kundenspezifischen Sonderdekoren. Die Addition all dieser positiven Eigenschaften befand die Jury eine Auszeichnung wert.
